

Description

The GM7800 series are classic regulators, which are useful in a wide range of applications. For example, you can use them for local on-card regulation to eliminate the distribution and problems associated with single point regulation.

The wide range of output voltages (5V to 27V) make them useful in an endless list of applications. Although designed as fixed voltage regulators, you can add a few external components to make adjustable voltages and currents.

Current limiting prevents the peak output current to a safe value. Safe-area protection of the output transistor limits internal power dissipation. If internal power dissipation becomes too high for the heat sinking provided, the thermal shutdown circuit activates to prevent the regulator from overheating. These versatile workhorses are easy to use. You do not need to bypass the output, although this does improve transient response. Input bypass is needed only if you place the regulator far from the filter capacitor of the power supply.

The GM7800 series is available in TO-220, TO-252 and TO-263 packages.

Features

- ◆ Output current up to 1.5A
- ◆ Output Voltages 5V, 6V, 8V, 8.5V, 9V, 10V, 12V, 15V, 18V, 20V, 24V and 27V
- ◆ 3- Terminal Regulators
- ◆ Internal Thermal Overload Protection
- ◆ Internal Short-Circuit Current Limiting
- ◆ Output Transistor Safe-Area Protection
- ◆ TO-220, TO-252 and TO-263 Packages
- ◆ High Power Dissipation Capability
- ◆ Direct replacements for LM78xx

Application

Post-Regulator Switching DC/DC Converters

Bias Supply for Analog Circuits

Instrumentation and Audio Systems

Logic Systems

Others too numerous to mention

TYPIC APPLICATION CIRCUITS

For a positive regulator, a 0.33µF bypass capacitor should be used on the input terminals. While not necessary for stability, an output capacitor of 0.1µF may be used to improve the transient response of the regulator. These capacitors should be on or as near as possible to the regulator terminals .

Dropout Voltage	$I_O=1A$	25°C		2.0		V
Bias Current		25°C		4.8	8	mA
Bias Current Change	$V_I=30V$ to 40V	0°C to 125°C			1.0	mA
	$I_O=5mA$ to 1A				0.5	
Short-Circuit Output Current		25°C		120		mA
Peak Output Current		25°C		2.1		A

*Pulse testing techniques are used to maintain the junction temperature as close to the ambient temperature as possible. Thermal effects must be taken into account.

** The specification applies only for DC power dissipation permitted by absolute maximum ratings
