Programmable High-Frequency Crystal Oscillator with Spread Spectrum (SSXO) and No-Spread Spectrum (XO) Option

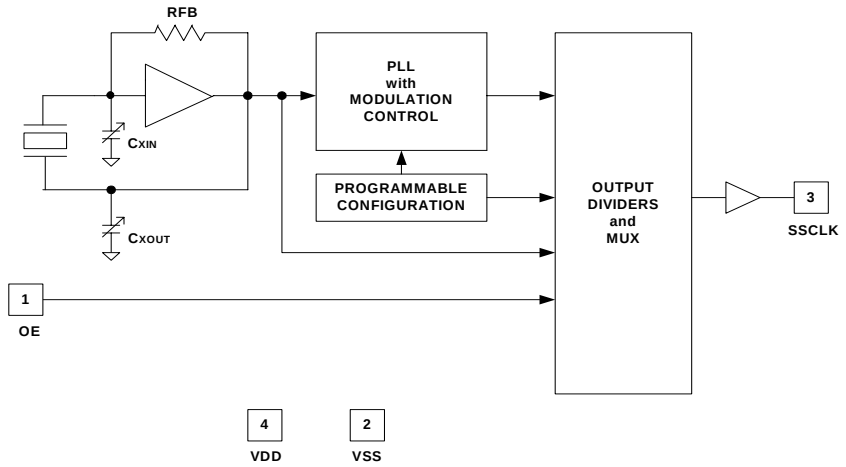

Features

- Crystal Oscillator with Spread Spectrum Clock (SSXO)
- No-Spread Spectrum (XO) Option
- Wide operating output clock frequency range of 10–166 MHz
- Programmable spread spectrum with nominal 31.5-kHz modulation frequency
- Center spread: ±0.25% to ±2.0%
- Down spread: –0.5% to –4.0%
- No spread: ± 0.0%
- Integrated phase-locked loop (PLL)
- 85 ps typical cycle-to-cycle Jitter with SSCLK = 133MHz
- 3.3V operation
- Output Enable function
- Package available in 4-pin Plastic JE
- Pb-free package

Benefits

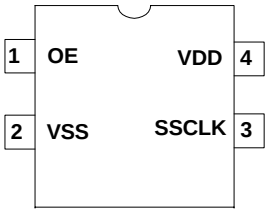

- Provides wide range of spread percentages for maximum electromagnetic interference (EMI) reduction, to meet regulatory agency electromagnetic compliance (EMC) requirements. Reduces development and manufacturing costs and time-to-market.
- This versatile programming feature enables the users to switch between SSXO (with Spread) and XO (without Spread) functions with ease.
- Internal PLL to generate up to 166-MHz output.
- Suitable for most PC, consumer, and networking applications
- Application compatibility in standard and low-power systems
- In-house programming of samples and prototype quantities is available using the CY3672 programming kit and CY3613 (JEC package) socket adapters. Production quantities are available through Cypress' value-added distribution partners or by using third-party programmers from BP Microsystems, HiLo Systems, and others.

Pin Definition

Pin	Name	Description
1	OE	**Output Enable pin**: **Active HIGH**. If OE = 1, SSCLK is enabled.
2	VSS	**Power supply ground**.
3	SSCLK	**Spread spectrum clock output (with or without spread)**.
4	VDD	**3.3V power supply**.

Functional Description

The CY25701JXC/FJXC is a Spread Spectrum Crystal Oscillator (SSXO) IC used for the purpose of reducing EMI found in today's high-speed digital electronic systems.

The device uses a Cypress proprietary PLL and Spread Spectrum Clock (SSC) technology to synthesize and modulate the frequency of the embedded input crystal. By frequency modulating the clock, the measured EMI at the fundamental and harmonic frequencies are greatly reduced. This reduction in radiated energy can significantly reduce the cost of complying with regulatory agency (EMC) requirements and improve time-to-market without degrading system performance.

The CY25701JXC/FJXC uses a programmable configuration memory array to synthesize output frequency and spread%.

The spread% is programmed to either center spread or down spread with various spread percentages. The range for center spread is from ±0.25% to ±2.00%. The range for down spread is from –0.5% to –4.0%. Contact the factory for smaller or larger spread% amounts if required. Refer to *Table 2* for spread selection and no-spread values.

The frequency modulated SSCLK output can be programmed from 10–166 MHz.

The CY25701JXC/FJXC is available in a 4-pin plastic package with operating temperature range of –20 to 70°C.

Programming Description

Field/Factory-Programmable CY25701JXC/FJXC

Field/Factory programming is available for samples and manufacturing by Cypress and its distributors. All requests must be submitted to the local Cypress Field Application Engineer (FAE) or sales representative. Once the request has been processed, you will receive a new part number, samples, and data sheet with the programmed values. This part number will be used for additional sample requests and production orders.

Additional information on the CY25701JXC/FJXC can be obtained from the Cypress web site at www.cypress.com.

Output Frequency, SSCLK Output (SSCLK, pin 3)

The modulated frequency at the SSCLK output is produced by synthesizing from the embedded crystal oscillator frequency input. The range of synthesized clock is from 10–166 MHz.

Spread Percentage (SSCLK, pin 3)

The SSCLK spread can be programmed to various spread percentage values from ±0.25% to ±2.0% for Center Spread and from –0.5% to –4.0% for Down Spread. Refer to *Table 2* for available spread options. Enter ±0.0% (No spread) for XO (Crystal Oscillator) without spread option.

Frequency Modulation (SSCLK, pin 3)

The frequency modulation is programmed at 31.5 kHz for all SSCLK frequencies from 10 to 166 MHz. Contact the factory if a higher-modulation frequency is required.

Notes:
2. Guaranteed by characterization, not 100% tested.
3. Jitter is configuration dependent. Actual jitter is dependent on output frequencies, spread percentage, temperature, and output load. For more information, refer to the application note, “Jitter in PLL Based Systems: Causes, Effects, and Solutions” available at http://www.cypress.com/clock/appnotes.html, or contact your local Cypress Field Application Engineer.

ООО «НИОКРсистемс» - это оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов. Реализуемая нашей компанией продукция насчитывает более полумиллиона наименований.

Благодаря этому наша компания предлагает к поставке практически не ограниченный ассортимент компонентов как оптовыми, мелкооптовыми партиями, так и в розницу.

Благодаря развитой сети поставщиков, помогаем в поиске и приобретении экзотичных или снятых с производства компонентов.

Наша компания это:

- Гарантия качества поставляемой продукции
- Широкий ассортимент
- Минимальные сроки поставок
- Техническая поддержка
- Подбор комплектации
- Индивидуальный подход
- Гибкое ценообразование
- Работаем по 275 ФЗ
