

# 1.2 GHz Clock Distribution IC, 1.6 GHz Inputs, Dividers, Five Outputs

Enhanced Product

**AD9512-EP**

## FEATURES

- Two 1.6 GHz, differential clock inputs
- 5 programmable dividers, 1 to 32, all integers
- 3 independent 1.2 GHz LVPECL outputs
- Additive output jitter 225 fs rms
- 2 independent 800 MHz/250 MHz LVDS/CMOS clock outputs
- Additive output jitter: 275 fs rms
- Serial control port
- Space-saving 48-lead LFCSP

## ENHANCED PRODUCT FEATURES

- Supports defense and aerospace applications (AQEC standard)
- Military temperature range ( $-55^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$ )
- Controlled manufacturing baseline
- 1 assembly/test site
- 1 fabrication site
- Enhanced product change notification
- Qualification data available on request

## APPLICATIONS

- Low jitter, low phase noise clock distribution
- Clocking high speed ADCs, DACs, DDSs, DDCs, DUCs, MxFEs
- Defense and aerospace applications

## GENERAL DESCRIPTION

The [AD9512-EP](#) provides a multi-output clock distribution in a design that emphasizes low jitter and low phase noise to maximize data converter performance. Other applications with demanding phase noise and jitter requirements can also benefit from this part.

There are five independent clock outputs. Three outputs are LVPECL (1.2 GHz), and two are selectable as either LVDS (800 MHz) or CMOS (250 MHz) levels.

Each output has a programmable divider that can be bypassed or set to divide by any integer up to 32. The phase of one clock output relative to another clock output can be varied by means of a divider phase select function that serves as a coarse timing adjustment.

## FUNCTIONAL BLOCK DIAGRAM

Figure 1.

The [AD9512-EP](#) is ideally suited for data converter clocking applications where maximum converter performance is achieved by encode signals with subpicosecond jitter.

The [AD9512-EP](#) is available in a 48-lead LFCSP and can be operated from a single 3.3 V supply. The temperature range is  $-55^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$ .

Additional application and technical information can be found in the [AD9512](#) data sheet.

Note that the delay block element that exists in Channel 4 of the [AD9512](#) standard product is not supported in this [AD9512-EP](#) version.

REVISION HISTORY

3/12—Revision 0: Initial Version

## SPECIFICATIONS

Typical (Typ) is given for  $V_S = 3.3 \text{ V} \pm 5\%$ ;  $T_A = 25^\circ\text{C}$ ,  $R_{SET} = 4.12 \text{ k}\Omega$ , unless otherwise noted. Minimum (Min) and Maximum (Max) values are given over full  $V_S$  and  $T_A$  ( $-55^\circ\text{C}$  to  $+85^\circ\text{C}$ ) variation.

### CLOCK INPUTS

Table 1.

| Parameter                              | Min  | Typ              | Max            | Unit       | Test Conditions/Comments                                                        |
|----------------------------------------|------|------------------|----------------|------------|---------------------------------------------------------------------------------|
| CLOCK INPUTS (CLK1, CLK2) <sup>1</sup> |      |                  |                |            |                                                                                 |
| Input Frequency                        | 0    |                  | 1.6            | GHz        |                                                                                 |
| Input Sensitivity                      |      | 150 <sup>2</sup> |                | mV p-p     | Jitter performance can be improved with higher slew rates (greater swing).      |
| Input Level                            |      |                  | 2 <sup>3</sup> | V p-p      | Larger swings turn on the protection diodes and can degrade jitter performance. |
| Input Common-Mode Voltage, $V_{CM}$    | 1.45 | 1.6              | 1.7            | V          | Self-biased; enables ac coupling; at full temperature range                     |
|                                        | 1.5  | 1.6              | 1.7            | V          | At $-40^\circ\text{C}$ to $+85^\circ\text{C}$ .                                 |
| Input Common-Mode Range, $V_{CMR}$     | 1.3  |                  | 1.8            | V          | With 200 mV p-p signal applied; dc-coupled.                                     |
| Input Sensitivity, Single-Ended        |      | 150              |                | mV p-p     | CLK2 ac-coupled; CLK2B ac bypassed to RF ground.                                |
| Input Resistance                       | 4.0  | 4.8              | 5.6            | k $\Omega$ | Self-biased.                                                                    |
| Input Capacitance                      |      | 2                |                | pF         |                                                                                 |

<sup>1</sup> CLK1 and CLK2 are electrically identical; each can be used as either differential or single-ended input.

<sup>2</sup> With a  $50 \Omega$  termination, this is  $-12.5 \text{ dBm}$ .

<sup>3</sup> With a  $50 \Omega$  termination, this is  $+10 \text{ dBm}$ .

### CLOCK OUTPUTS

Table 2.

| Parameter                                     | Min          | Typ          | Max          | Unit | Test Conditions/Comments                         |

## FUNCTION PIN

Table 7.

| Parameter             | Min | Typ | Max | Unit                    | Test Conditions/Comments                                                                                                         |
|-----------------------|-----|-----|-----|-------------------------|----------------------------------------------------------------------------------------------------------------------------------|
| INPUT CHARACTERISTICS |     |     |     |                         | The FUNCTION pin has a 30 k $\Omega$ internal pull-down resistor. This pin should normally be held high. Do not let input float. |
| Logic 1 Voltage       | 2.0 |     |     | V                       |                                                                                                                                  |
| Logic 0 Voltage       |     |     | 0.8 | V                       |                                                                                                                                  |
| Logic 1 Current       |     | 110 |     | $\mu$ A                 |                                                                                                                                  |
| Logic 0 Current       |     |     | 1   | $\mu$ A                 |                                                                                                                                  |
| Capacitance           |     | 2   |     | pF                      |                                                                                                                                  |
| RESET TIMING          |     |     |     |                         |                                                                                                                                  |
| Pulse Width Low       | 50  |     |     | ns                      |                                                                                                                                  |
| SYNC TIMING           |     |     |     |                         |                                                                                                                                  |
| Pulse Width Low       | 1.5 |     |     | High speed clock cycles | High speed clock is CLK1 or CLK2, whichever is being used for distribution.                                                      |

**SYNC STATUS PIN**

Table 8.

| Parameter                        | Min | Typ | Max | Unit | Test Conditions/Comments |
|----------------------------------|-----|-----|-----|------|--------------------------|
| OUTPUT CHARACTERISTICS           |     |     |     |      |                          |
| Output Voltage High ( $V_{OH}$ ) | 2.7 |     |     | V    |                          |
| Output Voltage Low ( $V_{OL}$ )  |     |     | 0.4 | V    |                          |

**POWER**

Table 9.

| Parameter                               | Min | Typ | Max | Unit | Test Conditions/Comments                                                                                                                                          |
|-----------------------------------------|-----|-----|-----|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| POWER-UP DEFAULT MODE POWER DISSIPATION |     | 550 | 600 | mW   | Power-up default state; does not include power dissipated in output load resistors. No clock.                                                                     |
| POWER DISSIPATION                       |     |     | 800 | mW   | All outputs on. Three LVPECL outputs @ 800 MHz, two CMOS out @ 62 MHz (5 pF load). Does not include power dissipated in external resistors.                       |
|                                         |     |     | 850 | mW   | All outputs on. Three LVPECL outputs @ 800 MHz, two CMOS out @ 125 MHz (5 pF load). Does not include power dissipated in external resistors.                      |
| Full Sleep Power-Down                   |     | 35  | 60  | mW   | Maximum sleep is entered by setting 0x0A[1:0] = 01b and 0x58[4] = 1b. This powers off all band gap references. Does not include power dissipated in terminations. |
| Power-Down (PDB)                        |     | 60  | 80  | mW   | Set FUNCTION pin for PDB operation by setting 0x58[6:5] = 11b. Pull PDB low. Does not include power dissipated in terminations.                                   |
| POWER DELTA                             |     |     |     |      |                                                                                                                                                                   |
| CLK1, CLK2 Power-Down                   | 10  | 15  | 25  | mW   |                                                                                                                                                                   |
| Divider, DIV 2 to 32 to Bypass          | 23  | 27  | 33  | mW   | For each divider.                                                                                                                                                 |
| LVPECL Output Power-Down (PD2, PD3)     | 50  | 65  | 75  | mW   | For each output. Does not include dissipation in termination (PD2 only).                                                                                          |
| LVDS Output Power-Down                  | 80  | 92  | 110 | mW   | For each output.                                                                                                                                                  |
| CMOS Output Power-Down (Static)         | 56  | 70  | 85  | mW   | For each output. Static (no clock).                                                                                                                               |
| CMOS Output Power-Down (Dynamic)        | 115 | 150 | 190 | mW   | For each CMOS output, single-ended. Clocking at 62 MHz with 5 pF load.                                                                                            |
| CMOS Output Power-Down (Dynamic)        | 125 | 165 | 210 | mW   | For each CMOS output, single-ended. Clocking at 125 MHz with 5 pF load.                                                                                           |

## ABSOLUTE MAXIMUM RATINGS

Table 10.

| Parameter                    | With Respect to | Rating                  |
|------------------------------|-----------------|-------------------------|
| VS                           | GND             | −0.3 V to +3.6 V        |
| DSYNC/DSYNCB                 | GND             | −0.3 V to $V_S + 0.3$ V |
| RSET                         | GND             | −0.3 V to $V_S + 0.3$ V |
| CLK1, CLK1B, CLK2, CLK2B     | GND             | −0.3 V to $V_S + 0.3$ V |
| CLK1                         | CLK1B           | −1.2 V to +1.2 V        |
| CLK2                         | CLK2B           | −1.2 V to +1.2 V        |
| SCLK, SDIO, SDO, CSB         | GND             | −0.3 V to $V_S + 0.3$ V |
| OUT0, OUT1, OUT2, OUT3, OUT4 | GND             | −0.3 V to $V_S + 0.3$ V |
| FUNCTION                     | GND             | −0.3 V to $V_S + 0.3$ V |
| SYNC STATUS                  | GND             | −0.3 V to $V_S + 0.3$ V |
| Junction Temperature         |                 | 150°C                   |
| Storage Temperature Range    |                 | −65°C to +150°C         |
| Lead Temperature (10 sec)    |                 | 300°C                   |

Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum ratings for extended periods may affect device reliability.

## THERMAL CHARACTERISTICS

Table 11. Thermal Resistance<sup>1</sup>

| Package Type  | $\theta_{JA}$ | Unit |
|---------------|---------------|------|
| 48-Lead LFCSP | 28.5          | °C/W |

<sup>1</sup> Thermal impedance measurements were taken on a 4-layer board in still air, in accordance with EIA/JESD51-7.

## ESD CAUTION

**ESD (electrostatic discharge) sensitive device.** Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

## PIN CONFIGURATION AND FUNCTION DESCRIPTIONS

## NOTES

1. DNC = DO NOT CONNECT TO THIS PIN.
2. THE EXPOSED PADDLE ON THIS PACKAGE IS AN ELECTRICAL CONNECTION AS WELL AS A THERMAL ENHANCEMENT. FOR THE DEVICE TO FUNCTION PROPERLY, THE PADDLE MUST BE ATTACHED TO GROUND, GND.

## ORDERING GUIDE

| Model <sup>1</sup> | Temperature Range | Package Description                              | Package Option |
|--------------------|-------------------|--------------------------------------------------|----------------|
| AD9512UCPZ-EP      | –55°C to +85°C    | 48-Lead Lead Frame Chip Scale Package [LFCSP_VQ] | CP-48-1        |
| AD9512UCPZ-EP-R7   | –55°C to +85°C    | 48-Lead Lead Frame Chip Scale Package [LFCSP_VQ] | CP-48-1        |

<sup>1</sup> Z = RoHS Compliant Part.

## NOTES

## NOTES

**ООО «НИОКРсистемс»** - это оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов. Реализуемая нашей компанией продукция насчитывает более полумиллиона наименований.

Благодаря этому наша компания предлагает к поставке практически не ограниченный ассортимент компонентов как оптовыми, мелкооптовыми партиями, так и в розницу.

Благодаря развитой сети поставщиков, помогаем в поиске и приобретении экзотичных или снятых с производства компонентов.

### **Наша компания это:**

- Гарантия качества поставляемой продукции
- Широкий ассортимент
- Минимальные сроки поставок
- Техническая поддержка
- Подбор комплектации
- Индивидуальный подход
- Гибкое ценообразование
- Работаем по 275 ФЗ
