

Differential line receiver

IL34C86

Microcircuit IL34C86 consists of four differential line receivers and is a microcircuit that meets international standards of data transmission RS-422, RS-423, and it is widely used in data transmission nets, particularly in a unit for local loop of ATS.

Functions implemented

This device carries out comparing inputs with low differential signal of 200mV and gives on output full signal with load carrying capacity of $\pm 6\text{mA}$, and also has hysteresis to improve noise margin.

L	X	Z
H	$V_{ID} \geq V_{TH} (\text{max})$	H
H	$V_{ID} \leq V_{TH} (\text{max})$	L

V_{ID} – difference of inputs A2-A1, or B2-B1, or C2-C1, or D2-D1.

V_{TH} – minimum differential input voltage.

Open* – no signals delivered to inputs.
